SAUSALITO MARIN CITY SCHOOL DISTRICT

Science Standards – GRADE 1

Physical Sciences

- 1. <u>Materials come in different forms (states)</u> <u>including solids, liquids, and gases</u>. As a basis for understanding this concept, students know:
 - a. solids, liquids, and gases have different properties.
 - b. the properties of substances can change when the substances are mixed, cooled, or heated.

Life Sciences

- 2. <u>Plants and animals meet their needs in different ways</u>. As a basis for understanding this concept, students know:
 - a. different plants and animals inhabit different kinds of environments and have external features that help them thrive in different kinds of places.
 - b. plants and animals both need water; animals need food, and plants need light.
 - c. animals eat plants or other animals for food and may also use plants or even other animals for shelter and nesting.
 - d. how to infer what animals eat from the shapes of their teeth (e.g., sharp teeth: eats meat; flat teeth: eats plants).
 - e. roots are associated with the intake of water and soil nutrients, green leaves with making food from sunlight.

Earth Sciences

- 3. Weather can be observed, measured and described. As a basis for understanding this concept, students know:
 - a. how to use simple tools (e.g., thermometer, wind vane) to measure

- weather conditions and record changes from day to day and over the seasons.
- b. the weather changes from day to day, but trends in temperature or of rain (or snow) tend to be predictable during a season.
- c. the sun warms the land, air, and water.

Investigation and Experimentation

- 4. Scientific progress is made by asking meaningful questions and conducting careful investigations. As a basis for understanding this concept, and to address the content the other three strands, students should develop their own questions and perform investigations. Students will:
 - a. draw pictures that portray some features of the thing being described.
 - b. record observations and data with pictures, numbers, and/or written statements.
 - c. record observations on a bar graph.
 - d. describe the relative position of objects using two references (e.g., above and next to, below and left of).
 - e. make new observations when discrepancies exist between two descriptions of the same object or phenomena
